# Module (Architectures): Solution Architectures Through Components

## Module Overview

Building solutions that address business problems is a crucial aspect of business. In IT, the solutions are built by combining applications, databases, networks, computing platforms, and middleware services into a working system that delivers value to the customers. This module discusses the architectural issues in building and deploying information systems solutions. After an overview of solution architectures (chapter 1), we discuss how to use the component-technologies to architect enterprise applications (chapter 2), and show how to architect enterprise data -- also known as shared corporate data -- in the modern web-XML environments (chapter 3). Chapter 4 concludes this module by discussing how these architectures can be implemented through several examples.

Figure 1 lists the chapter titles of this module (dark border) and shows the interrelationship between this module and the other two modules that address the e-Business Application Engineering/Reengineering issues.

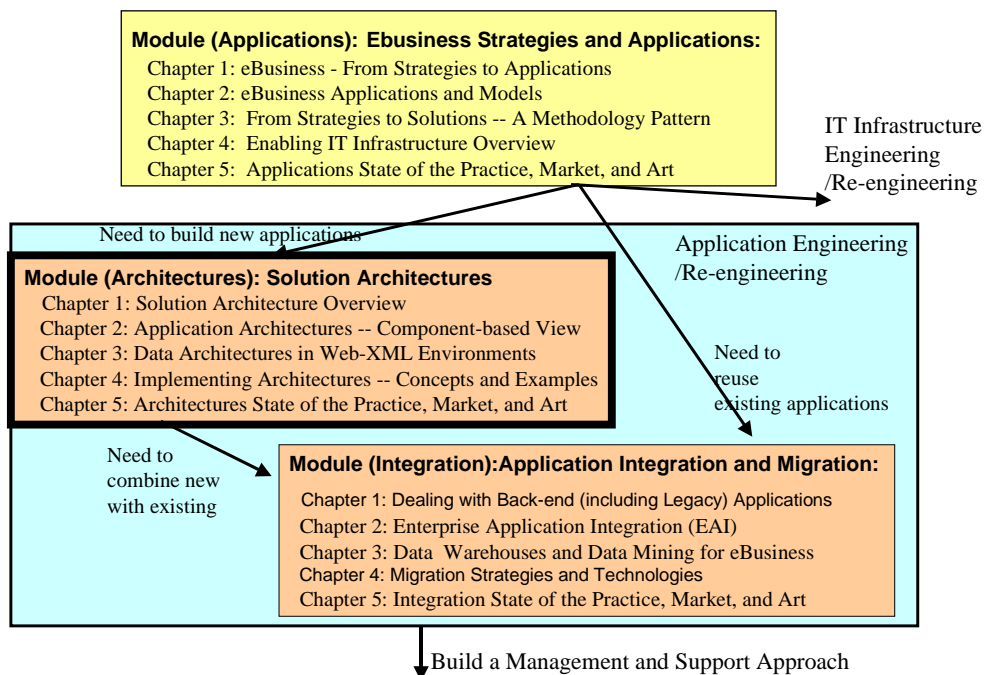

Figure 1: e-Business Application Engineering and Reengineering

## Reader Background Expected

Readers of this module should have a basic understanding of the e-business strategies, applications, methodologies, and infrastructure issues as presented in the "Applications" Module of this book. Although not essential, some background in enabling technologies (e.g., Web technologies, Web services, .NET, J2EE, and application servers for mobile and EC/EB applications) as discussed in the "Middleware" and "Platforms" modules may be beneficial.

## Module Case Studies

### XYZCorp Case Study: Solution Architecture Task

The focus of the XYZCorp case study in this module is on the Solutions Architecture Task (Figure 2). The purpose of this task is to develop a solution architecture that shows how the enterprise applications will be interconnected and deployed. This task will mainly concentrate on new applications needed for e-business and establish an overall architecture that includes application and data architectures at the enterprise level and review some of the architecture implementation issues.

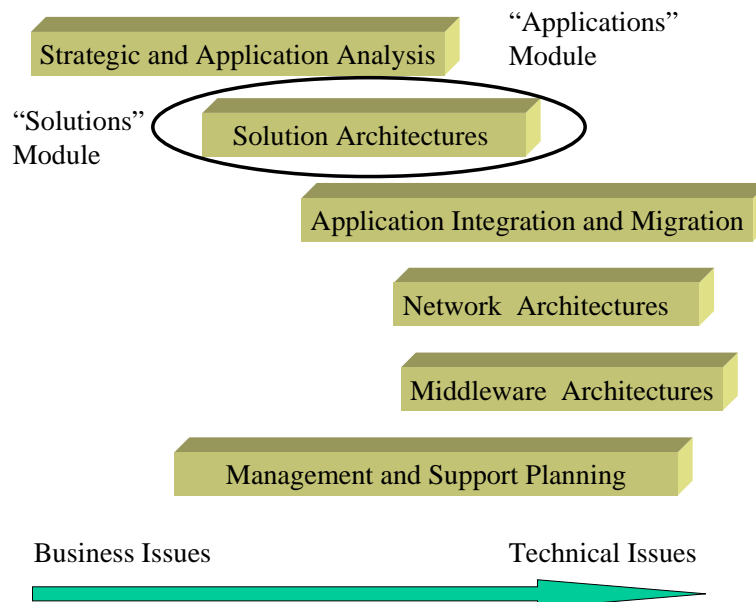

Figure 2: XYZCorp Planning Tasks

The Strategies and Applications Analysis Task has identified a wide range of new applications that will use the OCSI paradigm. Examples of the new applications are: a customer relationship management system, a new web-online purchasing system, a new "advanced" inventory management system for integrated order processing/inventory management, a management planning system that will support the management decisions in marketing and product planning, and a flexible manufacturing system to automate the manufacturing of electronic products. The following application engineering projects have been initiated:

- 1). Establish an overall Solution Architecture: This involves specifying application requirements and building an enterprise-wide architecture for these applications. What are the benefits and risks to develop these applications? What is the strategy to manage the risks? This project will be discussed at the end of Chapter 1 of this module.

2) Develop the detailed application software architecture for the new applications. What are the logical components of these applications? How many tiers will be used? What will each tier do? What type of middleware components will you use? This project will be discussed at the end of Chapter 2 of this module.

3) Develop the enterprise data architectures for the new applications. What will be the data allocation strategies? How will the data be accessed and shared across the XYZCorp network? This project will be discussed at the end of Chapter 3 of this module.

4) Implement the systems by using the chosen middleware components and develop detailed architecture diagrams and psuedo-code to map the system to the underlying platform. These diagrams should show the pieces of the systems, where do they reside and how do they interact with each other (i.e., middleware). This project will be discussed at the end of Chapter 4 of this module.

The initiative involves many existing, including legacy, applications. Examples of the legacy applications are: a financial information system that processes financial data (e.g., personnel costs, materials costs, etc.) stored on the IBM mainframe in a DB2 Relational database, a mainframe-based corporate material requirement planning (MRP) system that contains bill of materials (raw materials) information in IMS databases and outside vendor information in DB2 databases, and a UNIX-based order processing system that was developed in the 1980s to receive orders, verify them, and send them to the mainframe for shipping/receiving and billing purposes. Approaches to deal with these and other existing applications will be developed in the "Integration" Module.

### Additional Case Studies and Examples

Several additional case studies and examples are discussed in the chapters of this module. A number of case studies that are relevant to the topics discussed in this module appear regularly in trade magazines, vendor documents, web sites and books. Chapter 5 of this module gives a sample of relevant case studies and points to numerous sources for additional case studies and examples.

In addition, the following case studies in the "Case Studies and Examples" Chapter of the "Overview" Module can be used to illustrate different aspects of the subject matter:

Section 2.3      E-commerce/e-Business Examples: These examples can be used to understand how different architectural choices were made some time ago and to analyze how component-based architectures could be used for the cases.

Section 2.5      A Financial Marketplace: After reviewing this case study, you can choose a solution architecture for this marketplace.

Section 2.9      A Customer Relationship Management Portal: Many architectural choices are made in this case study. Can you improve on this?

Section 2.12.1   Hewlett Packard's Migration to Client/Server Architecture: This is an interesting "classical" case study about architectures. How would you develop this architecture by using the latest platforms (XML Web Services, .NET, and J2EE)?

# Module Contents -- High Level

## 1 SOLUTION ARCHITECTURE OVERVIEW

- 1.1 INTRODUCTION
- 1.2 ARCHITECTURE OVERVIEW
- 1.3 WEB-BASED SOLUTION ARCHITECTURES -- FROM HTML TO COMPONENTS
- 1.4 COMPONENT-BASED SOFTWARE ARCHITECTURE CONCEPTS
- 1.5 3G ARCHITECTURES -- A COMPONENT-BASED APPROACH
- 1.6 A PROCEDURE FOR BUILDING SOLUTION ARCHITECTURES - QUICK REVIEW
- 1.7 EXAMPLES OF ARCHITECTURE PATTERNS -- CUSTOMIZING THE METHODOLOGY
- 1.8 SUMMARY
- 1.9 CASE STUDY: XYZCORP EMBARKS ON SOLUTION ARCHITECTURES
- 1.10 REVIEW QUESTIONS AND EXERCISES
- 1.11 ADDITIONAL INFORMATION

## 2 ENTERPRISE APPLICATION ARCHITECTURES - A COMPONENT-BASED APPROACH

- 2.1 INTRODUCTION
- 2.2 COMPONENT-BASED SOFTWARE ARCHITECTURES - REVISITED
- 2.3 COMPONENT-BASED ARCHITECTURE PLATFORMS: WEB SERVICES, J2EE AND .NET
- 2.4 HOW TO BUILD COMPONENT-BASED APPLICATION ARCHITECTURES
- 2.5 STEP 1: DEFINE/REFINE THE COMPONENT OBJECT MODEL
- 2.6 STEP 2: SEPARATE CONCERNS INTO LOGICAL TIERS (TECHNOLOGY-INDEPENDENT MODEL)
- 2.7 STEP 3: DECOMPOSE APPLICATION INTO PHYSICAL HARDWARE TIERS
- 2.8 STEP 4: CHOOSE THE IT INFRASTRUCTURE AND BUILD A TECHNOLOGY-SPECIFIC MODEL
- 2.9 STEP 5: PERFORMANCE ANALYSIS AND ALLOCATION STRATEGIES
- 2.10 EXAMPLE OF A COMPONENTS-BASED ARCHITECTURE
- 2.11 SUMMARY
- 2.12 CASE STUDY: APPLICATION SOFTWARE ARCHITECTURES FOR XYZCORP
- 2.13 REVIEW PROBLEMS AND EXERCISES
- 2.14 ADDITIONAL INFORMATION

## 3 - ENTERPRISE DATA (INFORMATION) ARCHITECTURES IN WEB-XML ENVIRONMENTS

- 3.1 INTRODUCTION
- 3.2 CONCEPTS AND DEFINITIONS
- 3.3 STEP 1: INFORMATION REQUIREMENT DEFINITIONS
- 3.4 STEP 2: DATA MODELING
- 3.5 STEP 3: LOGICAL DATABASE DESIGN
- 3.6 STEP 4: DATA PARTITIONING AND CLUSTERING
- 3.7 STEP 5: DATA ALLOCATION STRATEGIES
- 3.8 STEP 6: DATABASE CONNECTIVITY AND INTEROPERABILITY - DEALING WITH WEB AND XML
- 3.9 STATE OF THE PRACTICE: A DETAILED EXAMPLE
- 3.10 SUMMARY
- 3.11 CASE STUDY: ENTERPRISE DATA ARCHITECTURE FOR XYZCORP
- 3.12 REVIEW QUESTIONS AND EXERCISES
- 3.13 APPENDIX 3A: TWO ANALYTICAL DATA ALLOCATION METHODS
- 3.14 ADDITIONAL INFORMATION

## 4 ARCHITECTURE IMPLEMENTATION -- CONCEPTS AND EXAMPLES

- 4.1 INTRODUCTION
- 4.2 IMPLEMENTATION CONCEPTS
- 4.3 A SAMPLE APPLICATION
- 4.4 SIMPLE WEB CLIENT-SIDE APPLICATIONS
- 4.5 WEB-TIER APPLICATIONS USING CGI, SERVLETS AND JSPS
- 4.6 OCSI APPLICATION IMPLEMENTATION: GENERAL CONCEPTS
- 4.7 WEB-BASED DISTRIBUTED OBJECT APPLICATIONS WITH JAVA AND CORBA/DCOM
- 4.8 EJBs (ENTERPRISE JAVA BEANS) TO BUILD ENTERPRISE WIDE COMPONENT-BASED APPLICATIONS
- 4.9 XML WEB SERVICES AND SOAP/XML PROCESSING
- 4.10 TRANSACTION PROCESSING FOR OCSI APPLICATIONS
- 4.11 SUMMARY
- 4.12 CASE STUDY: XYZCORP IMPLEMENTS WEB-BASED SYSTEMS
- 4.13 REVIEW QUESTIONS AND EXERCISES
- 4.14 ADDITIONAL INFORMATION

## 5 STATE OF THE PRACTICE, MARKET, AND ART

- 5.1 INTRODUCTION
- 5.2 STATE OF THE PRACTICE
- 5.3 STATE OF THE MARKET -- COMMERCIALLY AVAILABLE PRODUCTS
- 5.4 STATE OF THE ART: STANDARDS, TRENDS, AND RESEARCH NOTES
- 5.5 EXERCISES

## **MODULE CONTENTS -- DETAILED**

### **1 SOLUTION ARCHITECTURE OVERVIEW**

- 1.1 INTRODUCTION
- 1.2 ARCHITECTURE OVERVIEW
  - 1.2.1 *Basic Definitions*
  - 1.2.2 *Solution Architectures -- A Closer Look*
  - 1.2.3 *Boundaries of Enterprise Solution Architectures -- What to Include and What Not To*
  - 1.2.4 *Quick Examples of a Solution Architecture*
- 1.3 WEB-BASED SOLUTION ARCHITECTURES -- FROM HTML TO COMPONENTS
  - 1.3.1 *Overview*
  - 1.3.2 *Simple Client-Side Applications*
  - 1.3.3 *Small and Medium Sized Applications*
  - 1.3.4 *Components (Java Beans and Enterprise Java Beans) and Distributed Objects*
- 1.4 COMPONENT-BASED SOFTWARE ARCHITECTURE CONCEPTS
  - 1.4.1 *What is a Component and Why Should You Care?*
  - 1.4.2 *Granularities of Components*
  - 1.4.3 *What is a Component-based Architecture*
  - 1.4.4 *Component-based Architecture Platforms*
- 1.5 3G ARCHITECTURES -- A COMPONENT-BASED APPROACH
  - 1.5.1 *Overview*
  - 1.5.2 *Promises and Pitfalls of OCSI Applications*
- 1.6 A PROCEDURE FOR BUILDING SOLUTION ARCHITECTURES - QUICK REVIEW
  - 1.6.1 *Overview*
  - 1.6.2 *Analysis -- Building a Technology Independent Model*
  - 1.6.3 *Architectures -- Building a Technology Specific Model*
  - 1.6.4 *Implementation*
  - 1.6.5 *Deployment and Support*
- 1.7 EXAMPLES OF ARCHITECTURE PATTERNS -- CUSTOMIZING THE METHODOLOGY
  - 1.7.1 *Overview*
  - 1.7.2 *Building Web-based Operational Support Applications (C2B, B2B)*
  - 1.7.3 *Building Web-Based Decision Support Systems (DSSs) - C2D Pattern*
  - 1.7.4 *Real-time Application Development (C2C)*
- 1.8 SUMMARY
- 1.9 CASE STUDY: XYZCORP EMBARKS ON SOLUTION ARCHITECTURES
  - 1.9.1 *Overall Solution Architecture Project*
- 1.10 REVIEW QUESTIONS AND EXERCISES
- 1.11 ADDITIONAL INFORMATION

### **2 ENTERPRISE APPLICATION ARCHITECTURES - A COMPONENT-BASED APPROACH**

- 2.1 INTRODUCTION
- 2.2 COMPONENT-BASED SOFTWARE ARCHITECTURES - REVISITED

- 2.2.1 *Components Versus Applications*
- 2.2.2 *Business Components as a Foundation of Application Architectures*
- 2.2.3 *Component-based Architectures*
- 2.2.4 *Infrastructure Components*
- 2.3 COMPONENT-BASED ARCHITECTURE PLATFORMS: WEB SERVICES, J2EE AND .NET
  - 2.3.1 *XML Web Services* (<http://msdn.microsoft.com>)
  - 2.3.2 *Sun's J2EE (Java 2 Enterprise Edition)* - (<http://java.sun.com/j2ee>)
  - 2.3.3 *Microsoft's Dot Net (.NET)* (<http://msdn.microsoft.com>).
  - 2.3.4 *Examples of J2EE, .NET and Web Services Configurations*
  - 2.3.5 *Combining XML Web Services with J2EE and .NET*
- 2.4 HOW TO BUILD COMPONENT-BASED APPLICATION ARCHITECTURES
  - 2.4.1 *Overview of Approach*
  - 2.4.2 *Model Driven Architecture from the Object Management Group (OMG)*
  - 2.4.3 *Organizational Notes*
- 2.5 STEP 1: DEFINE/REFINE THE COMPONENT OBJECT MODEL
  - 2.5.1 *Build/refine an object model*
  - 2.5.2 *Identify Components (Primitive and Business Components)*
- 2.6 STEP 2: SEPARATE CONCERNS INTO LOGICAL TIERS (TECHNOLOGY INDEPENDENT MODEL)
- 2.7 STEP 3: DECOMPOSE APPLICATION INTO PHYSICAL HARDWARE TIERS
  - 2.7.1 *Single Hardware Tiered Application Architectures*
  - 2.7.2 *Two Tiered Application Architectures*
  - 2.7.3 *Three Tiered Application Architectures*
  - 2.7.4 *Choosing Number of Tiers - The "Tiering Debate"*
- 2.8 STEP 4: CHOOSE THE IT INFRASTRUCTURE AND BUILD A TECHNOLOGY SPECIFIC MODEL
  - 2.8.1 *General Infrastructure Considerations*
  - 2.8.2 *Evaluate General Purpose Middleware Services*
  - 2.8.3 *Evaluate Specialized Services and Application Servers for Mobile and EC/EB Applications*
  - 2.8.4 *Evaluate Management and Support Services*
  - 2.8.5 *Analyze Network Support*
  - 2.8.6 *Understand Operating System Support*
  - 2.8.7 *Keep Business Reality in Mind*
- 2.9 STEP 5: PERFORMANCE ANALYSIS AND ALLOCATION STRATGIES
  - 2.9.1 *Overview*
- 2.10 EXAMPLE OF A COMPONENTS-BASED ARCHITECTURE
  - 2.10.1 *Overview*
  - 2.10.2 *A General Component-based Architecture*
  - 2.10.3 *Designing Components for IPurchase*
  - 2.10.4 *Implementing components*
  - 2.10.5 *Deploying Components*
- 2.11 SUMMARY
- 2.12 CASE STUDY: APPLICATION SOFTWARE ARCHITECTURES FOR XYZCORP
  - 2.12.1 *Hints About The Case Study*
- 2.13 REVIEW PROBLEMS AND EXERCISES
- 2.14 ADDITIONAL INFORMATION

### **3 - ENTERPRISE DATA (INFORMATION) ARCHITECTURES IN WEB-XML ENVIRONMENTS**

- 3.1 INTRODUCTION
- 3.2 CONCEPTS AND DEFINITIONS
  - 3.2.1 *Enterprise (Corporate) Data*
  - 3.2.2 *Role of Web-XML Data*
  - 3.2.3 *Data Life Cycle*
  - 3.2.4 *Data Architecture*
- 3.3 STEP 1: INFORMATION REQUIREMENT DEFINITIONS
- 3.4 STEP 2: DATA MODELING

- 3.4.1 *Overview of Data Modeling*
- 3.4.2 *Modeling of XML Data*
- 3.5 STEP 3: LOGICAL DATABASE DESIGN
- 3.6 STEP 4: DATA PARTITIONING AND CLUSTERING
  - 3.6.1 *Overview*
  - 3.6.2 *Data Partitioning (Fragmentation)*
  - 3.6.3 *Clustering*
  - 3.6.4 *Example of Partitioning (Fragmentation) and Clustering*
- 3.7 STEP 5: DATA ALLOCATION STRATEGIES
  - 3.7.1 *Overview*
  - 3.7.2 *Trade-offs in Data Duplication*
  - 3.7.3 *Intuitive Data Allocation Analysis*
  - 3.7.4 *Analytical Data Allocation*
- 3.8 STEP 6: DATABASE CONNECTIVITY AND INTEROPERABILITY - DEALING WITH WEB AND XML
  - 3.8.1 *Data Connectivity Strategies*
  - 3.8.2 *XML Data Access*
  - 3.8.3 *Data Interoperability*
- 3.9 STATE OF THE PRACTICE: A DETAILED EXAMPLE
  - 3.9.1 *Step 1: Information Requirements*
  - 3.9.2 *Step 2: Data Modeling*
  - 3.9.3 *Step 3: Logical Database Design*
  - 3.9.4 *Step 4: Fragmentation and Clustering*
  - 3.9.5 *Step 5: Data Allocation*
  - 3.9.6 *Step 6: Database Connectivity and Interoperability*
- 3.10 SUMMARY
- 3.11 5.13 CASE STUDY: ENTERPRISE DATA ARCHITECTURE FOR XYZCORP
- 3.12 5.14 REVIEW QUESTIONS AND EXERCISES
- 3.13 APPENDIX 3A: TWO ANALYTICAL DATA ALLOCATION METHODS
  - 3.13.1 *Non-Redundant Best Fit Data Allocation Method*
  - 3.13.2 *The Redundant Data Allocation Method*
- 3.14 ADDITIONAL INFORMATION

## 4 ARCHITECTURE IMPLEMENTATION -- CONCEPTS AND EXAMPLES

- 4.1 INTRODUCTION
- 4.2 IMPLEMENTATION CONCEPTS
  - 4.2.1 *Overview*
  - 4.2.2 *Key Application Implementation Considerations*
  - 4.2.3 *Implementation Approach*
- 4.3 A SAMPLE APPLICATION
- 4.4 SIMPLE WEB CLIENT-SIDE APPLICATIONS
  - 4.4.1 *Overview*
  - 4.4.2 *HTML and XML Based Applications*
  - 4.4.3 *Java Applet-Based Applications*
  - 4.4.4 *Building Wrappers -- General Considerations*
  - 4.4.5 *PowerBuilder for Developing Web-client Applications*
- 4.5 WEB-TIER APPLICATIONS USING CGI, SERVLETS AND JSPS
  - 4.5.1 *CGI-Based Application*
  - 4.5.2 *Implementation by using Servlets*
  - 4.5.3 *Implementation by Using Java Server Pages (JSPs)*
- 4.6 OCSI APPLICATION IMPLEMENTATION: GENERAL CONCEPTS
  - 4.6.1 *Overview*
  - 4.6.2 *Step 1: Detailed Design*
  - 4.6.3 *Step 2: Create Interface Definitions*
  - 4.6.4 *Step 3: Build Server Programs*

- 4.6.5 *Step 4: Build Client Program(s)*
- 4.6.6 *Step 5: Testing*
- 4.7 WEB-BASED DISTRIBUTED OBJECT APPLICATIONS WITH JAVA AND CORBA/DCOM
  - 4.7.1 *Overview*
  - 4.7.2 *Web-CORBA Applications*
  - 4.7.3 *Activex for Developing Web Applications*
- 4.8 EJBs (ENTERPRISE JAVA BEANS) TO BUILD ENTERPRISE WIDE COMPONENT-BASED APPLICATIONS
  - 4.8.1 *Overview*
  - 4.8.2 *Customer Example*
- 4.9 XML WEB SERVICES AND SOAP/XML PROCESSING
  - 4.9.1 *Overview*
